

### **Swift-e International Compatibility**

In order for Swift-e to work internationally, there are a number of requirements that we recommend you check before travelling abroad.

- Your mobile phone handset is compatible for international travel.
- Your mobile phone's international roaming settings are activated.
- Your mobile phone is set-up to receive text messages without entering a pin-code.

To make sure that these settings are enabled on your mobile phone, we advise that you call your mobile phone's Network Provider.

**NOTE:** While using Swift-e abroad, all text messages will be charged at your network operator's standard rate. You will *NEVER* be charged at a premium rate.
